February 1, 2023

Dear Parents and/or Guardians:

The New York State Department of Health requires that all school districts test their drinking water sources for lead contamination. We have had our water tested and samples submitted as required by law.

Effective December 22, 2022 the action level of lead in drinking water is 5 ppb, reduced from 15 ppb. In anticipation of this happening, on August 31, 2022 water samples in 16 areas were retested. Of those 16 samples, 8 were still reported to be above the action level of 5 ppb. The school district has taken the necessary action to prohibit the use of these faucets being used for drinking purposes.

We want to assure you that the Scio Central School District is in compliance with all of the regulations and we are committed to providing a safe and healthy learning environment for all students, staff and community members in our school buildings. A copy of the full report with our water testing results is available on the school district website at www.scioesd.org.

Should you have any questions, please contact our Director of Buildings & Grounds, Ms. Martin. Thank you for your continued support of our school and the facilities we keep safe for our children.

Sincerely

Jennifer Cappelletti
Superintendent
